

3 November 2010

## CEF Adjunct Investigator Symposium

Venue: MPI of Biophysics, Max-von-Laue-Str. 3, Lecture Hall (0.10)

---

- 13.00 Welcome and introduction
- 13.05 **Markus Bohnsack**  
(Goethe University, Institute of Molecular Biosciences)  
*Biogenesis and transport of ribonucleoprotein (RNP) complexes*
- 13.30 **Alexander Gottschalk**  
(Goethe University, Institute of Biochemistry)  
*Optogenetic analyses of synaptic transmission and ultrastructure neural networks, development and arrhythmia in C. elegans*
- 13.55 **Thomas Meier**  
(Max Planck Institute of Biophysics, Structural Biology)  
*The ATP synthase, a paradigmatic molecular machine: novel insights into the structure and function of an ion-driven motor*
- 14.20 **Krishnaraj Rajalingam**  
(Goethe University, Institute of Biochemistry II)  
*Novel role of Inhibitors of Apoptosis in regulating cell migration*
- 14.55 Coffee break
- 15.10 **Georg Wille**  
(Goethe University, Institute of Biophysics)  
*Watching them do it, or: observing enzymes during activation and turnover*
- 15.35 **Jens Wöhnert**  
(Goethe University, Institute of Molecular Biosciences)  
*Structural insights into the function of eukaryotic ribosome assembly factors required for small ribosomal subunit biogenesis*
- 16.00 **Özkan Yildiz**  
(Max Planck institute of Biophysics, Structural Biology)  
Molecular interactions of pore forming toxins from pathogens
- 16.25 Close
